PAL Camcorders

In the U.S., the TV system is known as NTSC, which uses 525 scan lines at 30 fps (frames per second). However, PAL uses 625 scan lines at 25 fps. So while camcorders can record video anywhere in the world, its where the video is played back that makes a difference. PAL camcorders are designed to play back in Europe, China, the Middle East, and South Africa. This means that these camcorders don't play back on American televisions.
